

| Line | Problem Identified                                                | Correct Element                            | Why Meaning Changes                                                                                 |
|------|-------------------------------------------------------------------|--------------------------------------------|-----------------------------------------------------------------------------------------------------|
| 1    | Uses obsolete HTML 4.01 Transitional Doctype instead of HTML5     | <!DOCTYPE html>                            | Browsers render in quirks/legacy mode rather than standard HTML5 rendering modes.                   |
| 57   | Uses <div class="header-bg"> instead of semantic landmark         | <header>                                   | Assistive technologies fail to identify the top banner as a site header landmark.                   |
| 59   | Uses deprecated presentation tag <center> and obsolete <font> tag | CSS styling (text-align, color, font-size) | Mixes visual presentation with structural semantics; ignored by accessibility tools.                |
| 65   | Navigation built using <p> and non-breaking spaces &nbsp;         | <nav> with <ul> / <li>                     | Screen readers cannot identify the section as navigation or announce list item counts to users.     |
| 82   | Uses <table> for layout framing of profile photo and text         | CSS Grid or Flexbox layout                 | Screen readers interpret layout tables as tabular data, reading out cell structures incorrectly.    |
| 85   | Missing alt attribute on <img> tag                                |           | Screen reader users receive no descriptive content or context for the image.                        |
| 101  | Direct <ol> child nested inside <ul> without wrapping <li>        | <li><ol>...</ol></li>                      | Invalid HTML nesting structure breaks accessibility object trees and screen reader list navigation. |
| 129  | Fourth <td> in third <tr> creates mismatched column count         | Remove extra cell or adjust colspan        | Corrupts data table semantics and visual table structure across browsers.                           |
| 138  | Form input missing matching <label for="..."> element             | <label for="name">Your Name:</label>       | Screen readers cannot associate the text label with the input field when focused.                   |
| 143  | Email field uses type="text" instead of type="email"              | <input type="email">                       | Disables built-in browser form validation and mobile keyboard optimization for email inputs.        |
